Adding Fractions Using Giant 1

$$\begin{array}{r} \frac{1}{3} \times \begin{array}{c} \text{Giant } 1 \\ \frac{5}{5} \\ \hline \frac{5}{5} \end{array} = \frac{5}{15} \\ + \frac{2}{5} \times \begin{array}{c} \text{Giant } 1 \\ \frac{3}{3} \\ \hline \frac{3}{3} \end{array} = \frac{6}{15} \\ \hline \frac{11}{15} \end{array}$$

Remember anything Times 1 = itself

$\frac{1}{3} \times 1 = \frac{1}{3}$ (or $\frac{5}{15}$)

$\frac{2}{5} \times 1 = \frac{2}{5}$ (or $\frac{6}{15}$)
